Lessons Learned in AI projects

In KMGN KM-AI course, Session 20, systematic learning through Lessons Learned debriefing sessions was discussed as crucial in AI/ML projects due to the iterative nature of tasks. Understanding biases and using concise debriefing methods were emphasized for successful organizational learning.

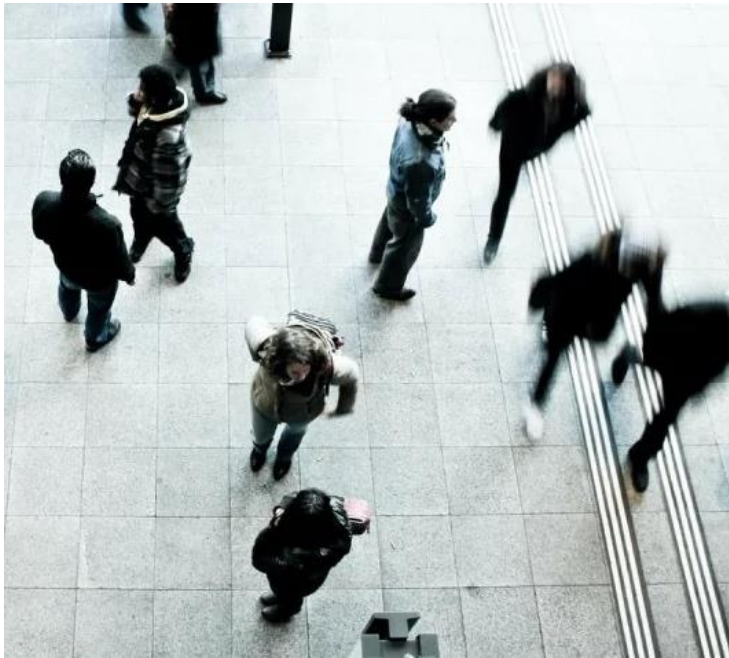

03

Starting the AI journey as a knowledge manager

In the KMGN KM-AI course, Annie led a session with Jay Zeidi to discuss how to start and join an AI project. The key is to understand the business challenge, outline the solution, and demonstrate similar projects. Knowledge managers can add value by offering knowledge engineering and practical solutions.

Human Empowerment in an AI generation - it's our responsibility

In the KM-AI course's 22nd session, participants discussed the future of human beings in the era of AI. While machines are surpassing humans in various tasks, there are still areas where humans excel, such as ethics and policy-making. Society, organizations, and individuals must prepare themselves through education, upskilling, and re-engineering job roles to take advantage of the opportunities AI presents.
